

HW4

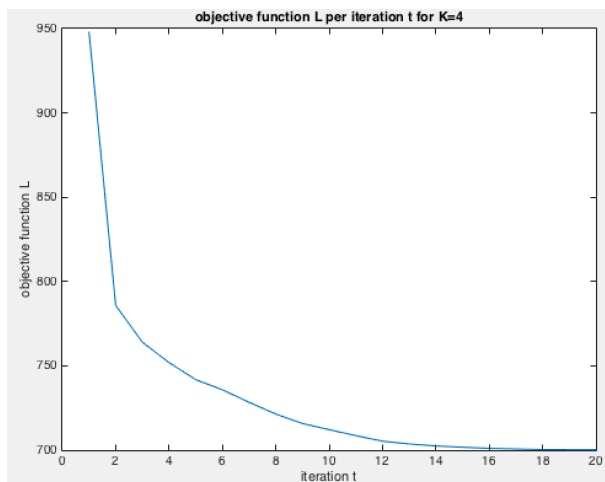

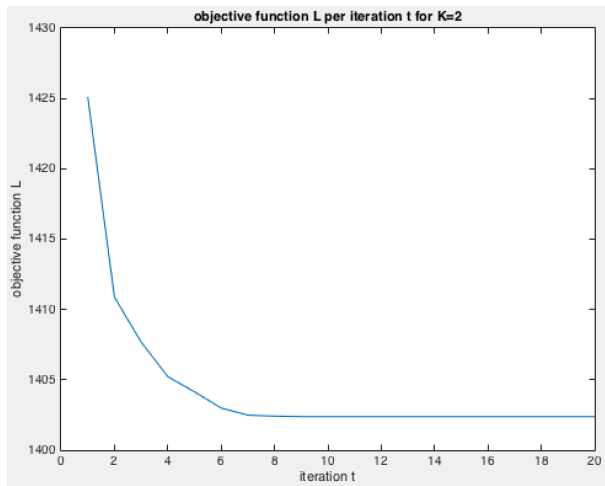

Shanqing Tan

st2972

Problem1

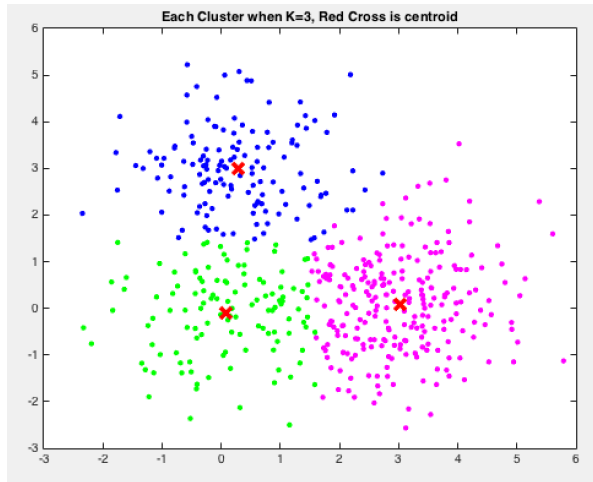

1. For $K = 2, 3, 4, 5$, plot the value of the K-means objective function per iteration for 20 iterations.

The pictures are as followed:

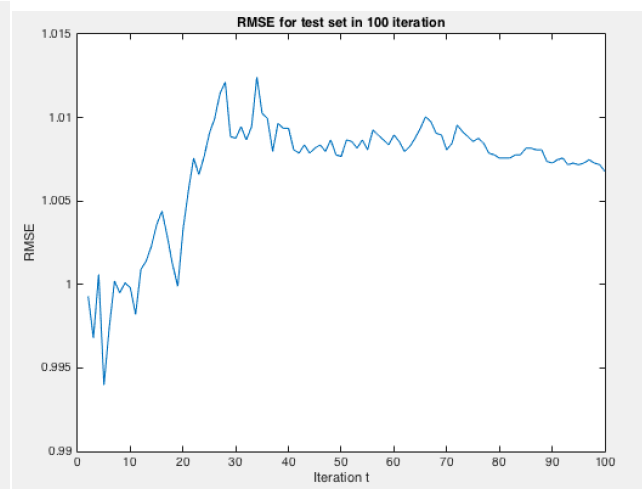

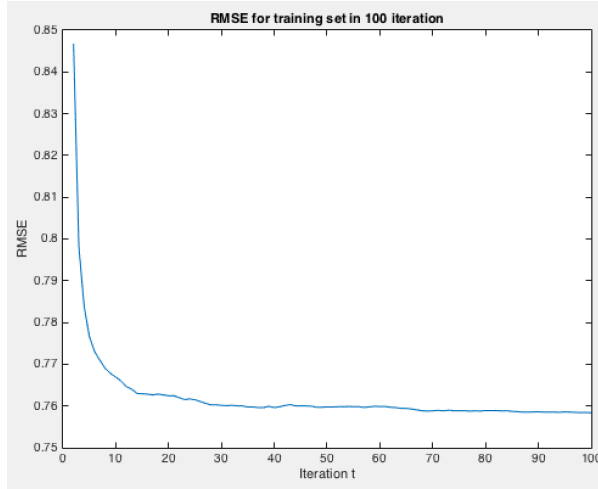

2. . For $K = 3, 5$, plot the 500 data points and indicate the cluster of each for the final iteration by marking it with a color or a symbol.

The centroids of the clusters are marked by red cross.

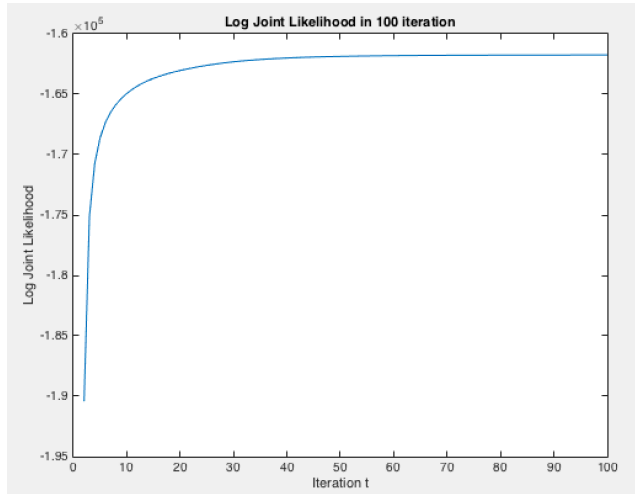

Problem2

1. . Plot the RMSE of your predictions on the held out test set provided for iteration number 2 to 100.

2. On a separate plot, show the log joint likelihood for iterations 2 to 100.

3. After 100 iterations, pick three reasonably well-known movies from the list provided and for each movie find the 5 closest movies according to Euclidean distance using their respective locations v_j . List the query movie, the five nearest movies and their distances. A mapping from index to movie is provided with the data.

query movie: Star Wars (1977)

1st nearest movie: Empire Strikes Back, The (1980), distance=0.28458

2nd nearest movie: Return of the Jedi (1983), distance=0.51839

3rd nearest movie: Raiders of the Lost Ark (1981), distance=0.78797

4th nearest movie: Star Trek: The Wrath of Khan (1982), distance=1.0033

5th nearest movie: Aliens (1986), distance=1.0201

query movie: 101 Dalmatians (1996)

1st nearest movie: Indian in the Cupboard, The (1995), distance=0.477

2nd nearest movie: Santa Clause, The (1994), distance=0.51133

3rd nearest movie: Cool Runnings (1993), distance=0.55454

4th nearest movie: Father of the Bride Part II (1995), distance=0.56721

5th nearest movie: Hard Rain (1998), distance=0.5823

query movie: Air Force One (1997)

1st nearest movie: Courage Under Fire (1996), distance=0.62194

2nd nearest movie: Tombstone (1993), distance=0.63635

3rd nearest movie: Hunt for Red October, The (1990), distance=0.71576

4th nearest movie: Absolute Power (1997), distance=0.78829

5th nearest movie: Peacemaker, The (1997), distance=0.79571
